

HR Analytics Interactive Dashboard

Dashboard | PowerBi

Dataset Size

- **Total Rows / Employees** : 1,480
- **Total Columns / Features** : 38
- **Dataset Size** : 1,480 × 38
- **Each row represents** : 1 employee
- **Target/Key variable** : Attrition — Number of employees who left vs stayed

About the Dataset

- This dataset contains employee-level information used to analyze employee attrition and understand the factors associated with employees leaving an organization. It includes 1,480 employee records and 38 features covering demographics, job details, salary, satisfaction, experience, work-life balance, overtime, and other employment-related factors.
- The main categories of information are:
 - Employee/Demographics: Employee ID, Age, Gender, Marital Status, Education
 - Job Information: Department, Job Role, Job Level, Business Travel
 - Salary: Monthly Income, Salary Slab, Daily Rate, Hourly Rate, Salary Hike %
 - Satisfaction: Environment Satisfaction, Job Satisfaction, Relationship Satisfaction
 - Experience: Total Experience, Years at Company, Years in Current Role, Years Since Promotion
 - Work Factors: Overtime, Distance from Home, Training, Work-Life Balance
 - Performance: Performance Rating, Job Involvement
 - Attrition: Indicates whether an employee left the organization.

Project Objective

The main objective is to analyze employee attrition and identify patterns or factors that may be associated with employees leaving the organization.

Data Cleaning and Processing

Data Cleaning was performed in Power Query

1. Removing Duplicates

The Remove Duplicates option was used to identify and remove duplicate employee records. This ensures that each employee record is unique.

2. Correcting Spelling Mismatches

In the Business Travel column, inconsistent values such as Travel_Rarely and TravelRarely were identified. The inconsistent spelling was standardized to Travel-Rarely.

3. Detecting & Correcting Data Types

The data types of all columns were checked for any mismatches. In Power Query, the Detect Data Type option was used after selecting the relevant columns. This automatically assigns appropriate data types such as Text, Whole Number, Decimal Number, etc.

Understanding Interactive Dashboard

The dashboard is fully interactive; selecting specific department and age group in the slicers automatically updates all KPIs, charts, and graphs to help easily extract specific data

Key Insights

1. Analysing company's employee attrition, average employee age and average work experience and finding it's conclusion
1. Total Employees & Attrition
 - The dataset contains 1,417 total employees.
 - Out of these, 1,186 employees are currently active.
 - Therefore, 231 employees have left the company.
 - The overall attrition rate is 16.3%.
2. Average Age of Employees
 - The average age of employees in the dataset is approximately 36.94 years.
 - This indicates that the workforce has an average age of around 37 years.
3. Average Work Experience
 - Employees have an average total work experience of 7.04 years.
 - This means that, on average, employees in the dataset have around 7 years of total professional experience.

Conclusion :

The Analysis indicates an attrition rate of 16.3% To improve employee retention maintaing an Employee Performance Scorecard to regularly track employee performance, achievements, task completion, and contribution. Provide performance-based incentives and bonuses to recognize employees who consistently perform well.
Introduce rewards for achieving important targets or completing tasks successfully.
Provide career growth and promotion opportunities to high-performing employees.
Regularly collect employee feedback to understand reasons behind dissatisfaction and potential attrition.

2. Administration Department Attrition

The Administration department has the highest attrition rate in the company at 20.7%. Out of a total workforce base of 406 employees in this department, 322 are active and 84 have left. A deeper dive into the data reveals key insights regarding salary and gender distribution among the departed employees:

Salary Impact:
Out of the employees who left, 26 employees fall into the 6–10 LPA salary bracket.

Gender Breakdown:
Male employees are leaving in higher numbers than females. Specifically, out of those 26 mid-level earners (6–10 LPA), 16 are males. Overall, the total count of departed male employees in the department stands at 55, showing a significantly higher attrition ratio among males compared to females.

Activable Recommendations :
the Administration department faces its highest attrition rate (20.7%), driven predominantly by males aged 26–35 earning between 6–10 LPA. This trend points to a critical retention gap among mid-level, ambitious professionals who may feel stagnant or under-compensated in routine administrative roles. Three key steps
Salary Benchmarking: Review compensation for the 6–10 LPA bracket to stay competitive.
Clear Career Paths: Introduce structured promotions and skill development for the 26–35 age group.
Targeted Exit Interviews: Conduct specific surveys to understand the exact pain points driving male employees to leave the administration department.

3. Age & Salary Insights

When analyzing attrition by age, the 26–35 age group emerges as the most critical vulnerability area, recording a total of 111 departures (67 males and 44 females). This demographic typically consists of experienced professionals who have prior work backgrounds and clear career expectations. Within this specific age bracket and the broader department trends, the salary breakdown reveals:
1. Mid-Level Earners (6–10 LPA): 36 employees fall into this bracket (comprising 20 males and 16 females).
2. Higher Earners (10+ LPA): A significant chunk of 34 employees earning above 10 LPA have also left the department. Professionals aged 26–35—who bring previous work experience and are looking for stability, higher growth, or better compensation—are leaving the department at the highest rate, with male employees driving a larger share of these exits across both mid and higher salary brackets.

Potential Root Cause :

- 1. Need for Deep-Dive Feedback: A granular, personalized approach is required to understand true retention drivers.
- 2. Incentive & Bonus Gaps: Lack of proper financial rewards and performance recognition makes high performers feel undervalued.
- 3. Impact on Top Talent: This lack of motivation is likely driving experienced professionals (especially the 26–35 age group in mid-to-high salary brackets) to resign.
- 4. Way Forward: Implement targeted surveys and personal feedback sessions to close these compensation gaps.

4. Department - Wise Attrition Comparison

Highest Attrition (Sales Department):

The Sales department records the highest attrition rate across the company at 25.1%, indicating major retention challenges in this function.

Lowest Attrition (Operations Department):

In contrast, the Operations department maintains the healthiest retention, recording the lowest attrition rate at just 8.4%.

5. Operation Department Benchmark

Replicable Retention Strategy:

While smaller functions like Finance have a minimal headcount (~ 23 employees), the Operations Department handles the largest workforce in the company (~ 512 total, with 469 active) yet successfully maintains the lowest attrition rate at just 8.4%.

Conclusion :

Managing such a massive workforce with minimal exits indicates a highly effective work environment. We should prioritize auditing Operations to decode their core success drivers—particularly examining their performance bonus policies, incentive structures, and employee recognition frameworks—so we can successfully adapt and implement these proven retention strategies in high-turnover areas like Sales and Administration.

Overall Recommendation

Implement Regular Feedback & Personal Communication Channels:

We must establish structured, one-on-one communication and regular feedback sessions across all departments. This personalized approach will help management directly understand root employee concerns—whether they stem from dissatisfaction with the working environment, compensation gaps, or unclear growth paths. Additionally, introducing a formal employee appreciation and reward system for top performers will ensure hard work is visibly recognized, boosting morale and making employees feel truly valued as an integral part of the company.
